

About the Speaker

Missey Heinrichs is a Speech-Language Pathologist at Select Specialty Hospital in Davenport, IA. She has over 23 years experience working as an SLP in a variety of settings including acute rehabilitation, outpatient rehabilitation, neurofeedback therapy, and long-term acute care. Her interest include adults with acquired brain injury.

Melissa Heinrichs, MA, CCC/SLP

Select Specialty Hospital, Speech Therapist

Description

The Clubhouse Model is a form of community-based rehabilitation. A brain injury Clubhouse Model emphasizes the abilities of its members living with acquired brain injury. The Clubhouse Model encourages members to re-integrate into their community as they are assisted by clubhouse staff in a supported environment. Clubhouse members are empowered to return to meaningful occupations, enhanced quality of life, and participate in their community.

Objectives

1. Understanding of the Clubhouse Model.
2. How the Clubhouse Model increases quality of life for person(s) after brain injury.
3. How the Clubhouse Model strengthens the members and community it serves.
