WHY SCREEN FOR BRAIN INJURY?

Screening for brain injury is a best practice when serving Iowans with multi-occurring conditions.

EDUCATION AROUND BRAIN INJURY

Understanding brain injury and the common challenges may increase participation and enhance outcomes in service and treatment plans.

ADDRESSING THE POSITIVE SCREEN

We have options available at BIAIA to help with a positive screen:

- Iowa Brain Injury Resource Network (IBIRN)
- Case Consultation
- Neuro Resource Facilitation

SUPPORT FOR THE INTERDISCIPLINARY TEAM

Brain injury supports and services are often times a missing puzzle piece for a child experiencing behavioral health issues.

The Underrecognized Relationship

5.3 million people nationwide live with long-term disability as a result of traumatic brain injury

Did you know...

Children under the age of 10 are at higher risk for developing post-concussive anxiety disorder

Children over the age of 12 are 5 times more likely to experience post-traumatic depressive symptoms

2 years post-injury, novel psychiatric disorders were found in 63% of children who sustained a severe traumatic brain injury. 21% of children with mild injuries and only 4% of children with orthopedic injuries

Approximately 18% of all TBI-related emergency department visits involved children aged 0-4

2/3 of the children under 3-years-old who are physically abused, have traumatic brain injuries (TBI's)

The development of this project was supported through the Brain Injury Services Program (BISP) of Iowa, through contract 58B08B06 with the Iowa Department of Public Health (IDPH). The contents are the sole responsibility of the authors and do not necessarily represent the official views of IDPH.
